was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114 [gb]AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Direct Submission

Submitted (23-JUN-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 18A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: Clonerequest@sanger.ac.uk

on Jun 25, 2001 this sequence version replaced gi:14133045.

During sequence assembly data is compared from overlapping clones buring sequences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality data (i.e., phred quality >- chemistry or covered by high quality as confirmed by restriction digest. The following assembly was confirmed by restriction digest. The following aboreviations are used to associate primary accession numbers given the feature table with their source databases: Em:, EMBL: Sw:, SWISSPROT; Tr:, TREMBL: Wp., MORMPEP; Information on the WORMPEP; http://www.sancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.ancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      80146 bp DNA linear PRI 23 JUN-2001 sequence from clone RPI-203A15 on chromosome 6, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IMPORTANT: This sequence is not the entire insert of clone RP1-203A15 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP1-317N9 is at 78147 in this sequence. The true right end of clone RP11-703H16 is at 2000 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
